Carolyn

As clarification, we are not sending oil to the recycler. We sent approximately 24,000 gallons of water from maintenance activities on the system which contained an estimated 3,600 gallons of actual JP4. The JP4 containing water could not be conditioned on site for use in the boilers or thermal accelerators. We have over 20,000 gallons of conditioned fuel which will be used to produce steam in the boilers and/or in the thermal accelerators.

Don

I notice in the report you are sending oil to a recycler – are you still planning to convert boilers to run on recovered fuel at some point?

Carolyn

Wayne

The figure above is from page 27 of the ST012 weekly progress report dated March 4, 2015 which has been posted. Although the line representing W-37 indicates a rise in temperature, please be aware of the scale in that the rise is actually 0.03 of a degree Centigrade (from approximately 26.34 to 26.37. The same is true for U37.

If you have any questions, please call.

Can AMEC/TerraTherm please provide, to ADEQ, the perimeter wells' raw temperature data? Per the recent BCT exchange, ADEQ understands that AMEC and TerraTherm indicated that they could provide temperature data from Well W37, et al. To assist in disseminating the downhole well temperature information, ADEQ is fine with receiving this perimeter well temperature information as raw data.

Thanks for your assistance.

Wayne Miller,

ADEQ, Federal Projects Unit
